

Slinging and Signalling

Any type of crane lifting operation requires accurate and safe slinging of the load being lifted. Lifting operations will often involve a signaller who directs the crane operator in the movement and positioning of the load.

We train delegates how to sling and signal a crane load safely and effectively.

| Course Type | Operator Experience | Course Duration | Delegates | |
|--|---------------------|-----------------|-----------|--------------|
| Slinging and Signalling Slinging and Lifting | Basic | 1 Day | 6 Maximum | Make Enquiry |
| | Advanced | 2 Days | 8 Maximum | |
